

AHMED IBRAHIM ABDULALLAH ZUBANI

Cybersecurity Specialist & Security Tool Developer

Role: Cyber Security & Ethical Hacking | Focus: Python Security Automation, OSINT & Vulnerability Research | Date: September 2026

PROFESSIONAL PROFILE

Experienced cybersecurity specialist, security tool developer, and ethical hacker skilled in engineering custom Python security programs, penetration testing tools, OSINT intelligence utilities, and vulnerability research frameworks. Specializes in Python-based offensive and defensive automation, network scanning, reverse proxy routing, and API integration. Passionate advocate for leveraging advanced programming and artificial intelligence as core foundations for modern cyber defense and threat research.

TECHNICAL SKILLS & SPECIALIZATIONS

Cybersecurity & Offensive Engineering:	Penetration Testing, Vulnerability Assessment & Safety Testing, OSINT & Target Reconnaissance, Exploitation Tool Development, Threat Research.
Languages & Development:	Python 3 (Advanced Security Scripting, Socket Programming, API Automation), C/C++, Luau, JavaScript, HTML/CSS UI Conversion.
Security Tooling & Libraries:	SQL Injection Testing (sqlmap), Memory Forensics (Volatility 3), Cloud Auditing (Prowler), Network Analysis (Scapy/Raw Sockets), Burp Suite extensions.
API & Middleware Architecture:	RESTful Web APIs, Reverse Proxy Routing, Automated Authentication, Data Extraction & Parsing, Custom Developer Libraries.

FEATURED PROJECTS & DEVELOPMENTS

Safe Search Py — Social Media OSINT Target Reconnaissance Program

An advanced Python intelligence-gathering program designed for targeted OSINT research. Utilizing authentication with only a single social media account, the application programmatically crawls, extracts, and correlates public metadata to uncover a target's phone number, geolocation, associated accounts, and sensitive footprint information. Built with robust exception handling and API request orchestration.

Easy Protection Lib — Security & Vulnerability Tooling Library

A modular Python developer library engineered to accelerate the development of ethical hacking tools, deep security research utilities, and automated vulnerability testing frameworks. Provides streamlined abstractions for custom exploit creation, safety controls, payload encoding, and deep vulnerability scanning workflows.

Automated Security & API Utilities — Web & Network Recon Suite

Engineered specialized utilities for multi-platform identity verification, reverse proxy routing, and automated network reconnaissance. Includes tools for web API endpoint automation, payload customization, and programmatic account updates.

LEADERSHIP & OPEN-SOURCE FOOTPRINT

- **Cybersecurity Project Leadership:** Directing collaborative open-source security projects, managing tool releases, and leading ethical hacking research efforts.
- **Open-Source Ecosystem:** Active maintainer of custom Python libraries and cybersecurity repositories focused on OSINT, vulnerability assessment, and security automation.
- **Technical Research & Innovation:** Continuous development of specialized security scripts, defensive controls, and research tools for vulnerability identification.
